Powering Assets with Intelligence

Smart Connected Solution Empowers Manufacturers

Immediate Wins

- Inventory level optimization
- Reduce work stoppage delays
- Increase time on tasks
- Visibility into process deviations

The Challenge

Rising costs, tight labor markets and ongoing supply chain insecurity is challenging manufacturers to produce quality products on-time, on budget and on schedule.

The Solution

A 'smart connected' solution is an automated, sustainable approach providing supply chain visibility, process accountability, and intelligent reporting. Solution features include the automation of inventory levels, tracking and tracing of production floor processes, and real-time location of work in progress (WIP).

When deployed the software integrates with warehouse management programs (WMS), manufacturing execution systems (MES) and enterprise resource planning systems (ERP). Automated business analytics and reporting delivers an integrated and complete picture of an organization's production efficiency. Discrete manufacturers are investing in smarter technology solutions to reduce waste and facilitate better margin of industrial products.

Results

- Increase throughput by 5 - 9%
- Improve inventory turnover by 21%
- Reduce non-value add labor by 30%
- Reduce manual report creation by 60%
- Reputation with customer improved - PRICELESS!
