

Unlock Real-Time Operational Precision with Tego + Zebra

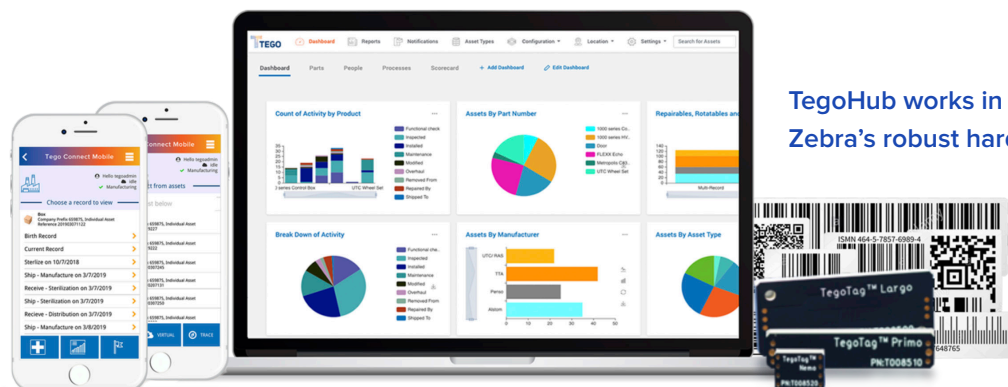

In today's industrial landscape, the difference between success and stagnation is visibility. Industrial leaders are under pressure to streamline operations, eliminate data silos, and make real-time, informed decisions.

Yet many operational teams are overwhelmed by data but starved for real insight. Enter **TegoHub**—Tego's end-to-end platform solution—and its seamless integration with Zebra Technologies' automated data capture and RFID solutions.

Built for Industry. Designed for Impact.

For over two decades, Tego has helped some of the world's most high-performing organizations—Boeing and Airbus—enable flyable part compliance and automate the maintenance chain. Now, TegoHub delivers complete visibility and actionable intelligence across the shop floor, warehouse, distribution center, and beyond.

TegoHub works in harmony with Zebra's robust hardware portfolio—including mobile computers, RFID printers and readers, barcode scanners, and sleds—to provide a unified, real-time view of every moving part of your business. Together, Tego and Zebra offer a powerful combination of intelligent automation, data capture, and real-time analytics, helping operations leaders move from chaos to clarity.

TegoHub works in harmony with
Zebra's robust hardware portfolio

One Platform. Total Operational Awareness.

TegoHub transforms raw data into decision-ready intelligence by integrating the work performed by people, the data related to parts, and the awareness of business activity across your enterprise. Whether you're managing work-in-progress on the shop floor, tracking inventory across multiple warehouses, or validating quality in production lines, TegoHub brings it all together in a single platform that reflects how well the business is performing.

When paired with Zebra's hardware—including devices like the FX9600 fixed RFID reader or the MC3330xR mobile RFID scanner—TegoHub offers unmatched flexibility and speed in data collection. No matter your environment—be it rugged, remote, or regulated—Tego and Zebra ensure you're working with the most accurate, up-to-date operational data.

Say Goodbye to Silos and Guesswork

Disconnected systems and data silos can stall progress and breed inefficiencies. TegoHub breaks down these barriers by delivering one unified view integrating real-time location systems (RTLS), digital twin models, and other system data together into one platform. The result? Cross-functional orchestration and precision at every level—from machine operators to the C-suite.

With TegoHub, operational and manufacturing leaders become proactive as they benefit from real-time operational insights into materials management, inventory status, production schedules, and quality control. Teams no longer need to wait for manual reports—they can respond to real time data, with confidence.

Designed for Today's Challenges

Industrial organizations today are racing to adopt Industry 4.0 technologies, but transformation doesn't have to be overwhelming. TegoHub is modular and scalable, allowing teams to start where it matters most and grow from there. Built on Zebra's trusted hardware, it delivers future-ready infrastructure backed by global technology leaders.

Let's Build the Future of Operational Excellence

Tego and Zebra deliver measurable results by aligning strategy with systems—and empowering teams to achieve operational excellence.
